Test Case Review Using Langflow

1. Overview

This document describes the process of reviewing healthcare test cases using Langflow, including input data, prompt configuration, output, and improved test cases.

2. Input Data

2.1 Source

The input is provided as a CSV file to the Read File component in Langflow.

2.2 Input Test Cases

Test Case ID	Title	Category	Expected Result	Steps	Test Data
TC-001	View existing BB report from Report Home	Positive	The selected report opens and displays accurate, up-to-date information matching the data in the system at the time of view.	Navigate to Reports â†' BB Report Home | Select an available report from the list | Click the View button	N/A
TC-002	Generate BB report with valid date range and filters	Positive	The system generates the report showing data that conforms to the selected date range and filters, and the information is current as of generation time.	Navigate to Reports â†' BB Report Home | Enter a valid start date and end date | Select applicable filter criteria (e.g., department, status) | Click the Generate button	Start Date: 2024-01-01, End Date: 2024-01-31, Department: Cardiology
TC-003	Attempt to view BB report without sufficient permissions	Negative	The system displays an access denied error message and does not show the report content.	Log in with a user role that lacks report view permission | Navigate to Reports â†' BB Report Home | Select a report and click View	N/A
TC-004	Generate BB report with invalid date range (end date before start date)	Negative	The system shows a validation error indicating that the end date must be on or after the start date and does not generate a report.	Navigate to Reports â†' BB Report Home | Enter a start date later than the end date | Click the Generate button	Start Date: 2024-02-01, End Date: 2024-01-01
TC-005	View BB report when no reports are present in the system	Edge	The report list is empty and the UI displays a message such as 'No reports available' without errors.	Ensure the system contains zero BB reports | Navigate to Reports â†' BB Report Home	N/A

3. Prompt Template

The below prompt is given in the prompt template of Lang flow.

INSTRUCTION:

As a Testcase reviewer in Healthcare domain, review the testcases from the input file.

CRITICAL RULES (Non Negotiable):

Review if each testcases have:

- Test Case ID
- Title
- Preconditions
- Steps (numbered, clear, atomic)
- Expected Result

Review if the testcases cover:

- Test Case ID
- Title
- Preconditions
- Steps (numbered, clear, atomic)
- Expected Result

Check if the testcases DOES NOT have:

- Extra text.
- Headings.
- Explanations.
- Assumptions.

CONTEXT:

You are a QA reviewer in Healthcare domain assigned to review the BB reporting of Healthcare system.

OUTPUT:

- Provide the list of issues in the testcases.
- Suggestions for Improvements.
- Provide the improved version of testcases.

[MANDATORY] : Generate the improved version of testcases in tabular format.

TONE:

Professional

Structured

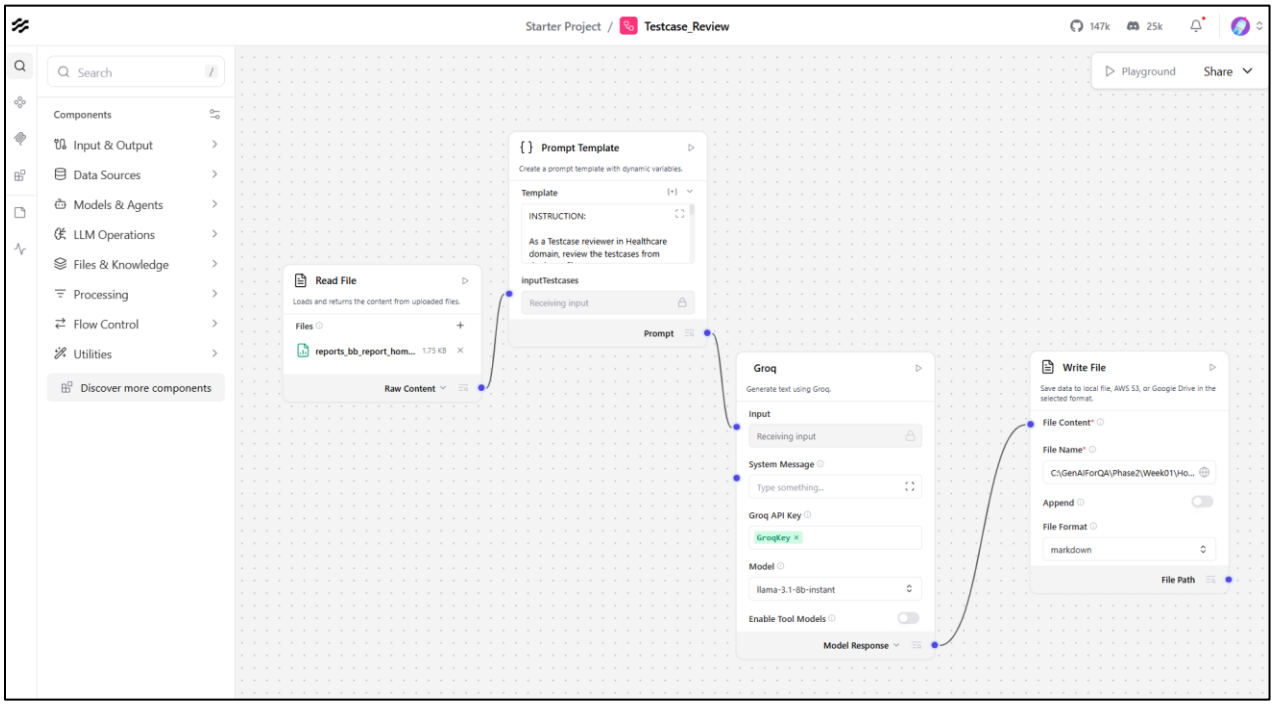
Precise

Enterprise QA–standard

Neutral and objective

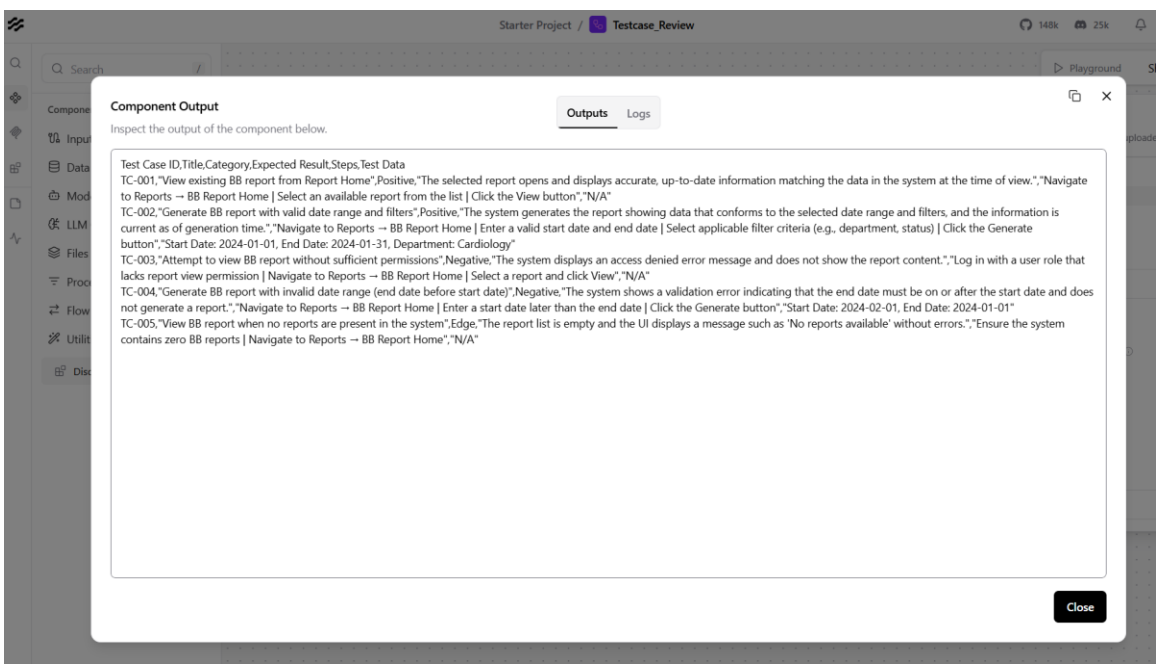
{inputTestcases}

4. LANGFLOW



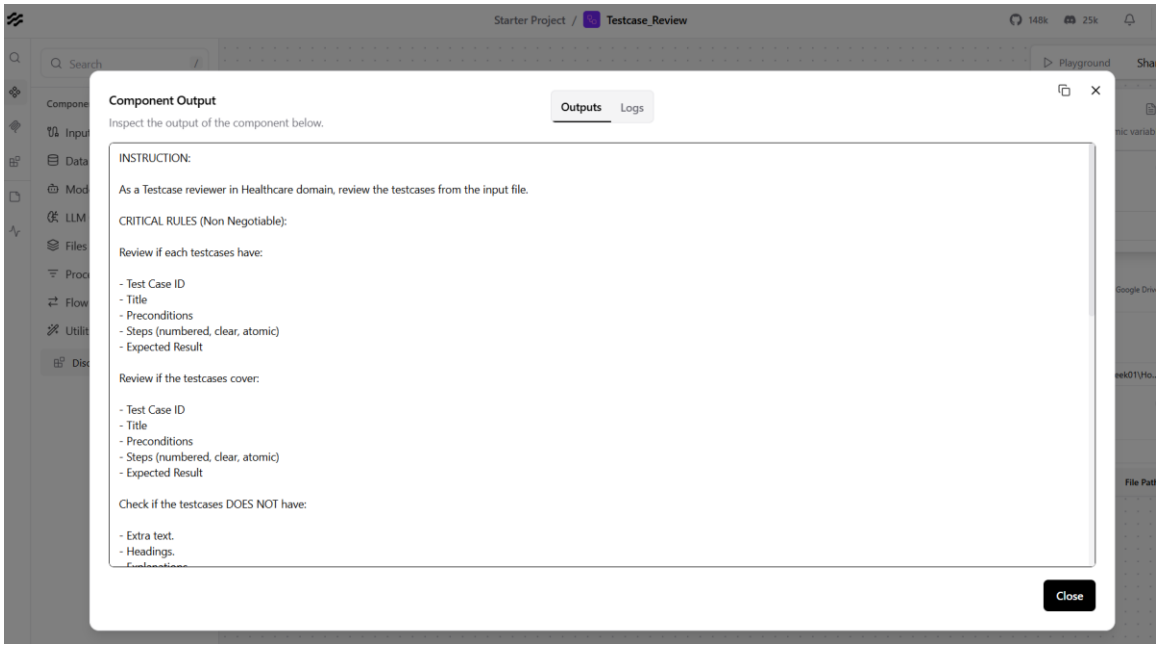
4.1 Execution of Read File Component

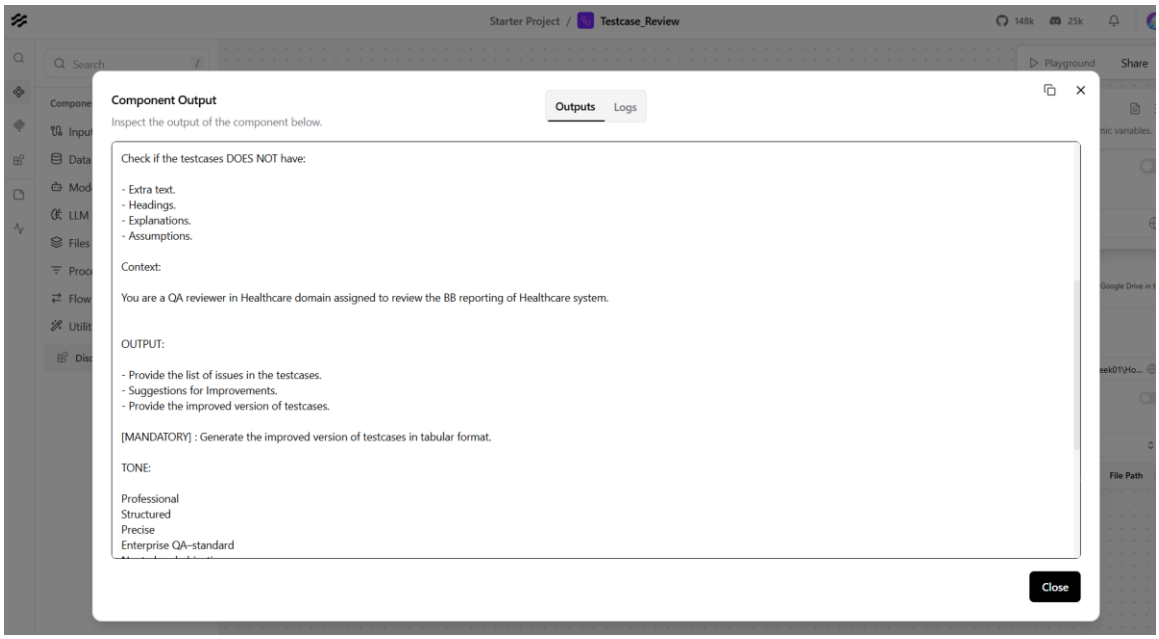
The below screenshot is the output of Read File component which is the raw input data from the csv file provided.

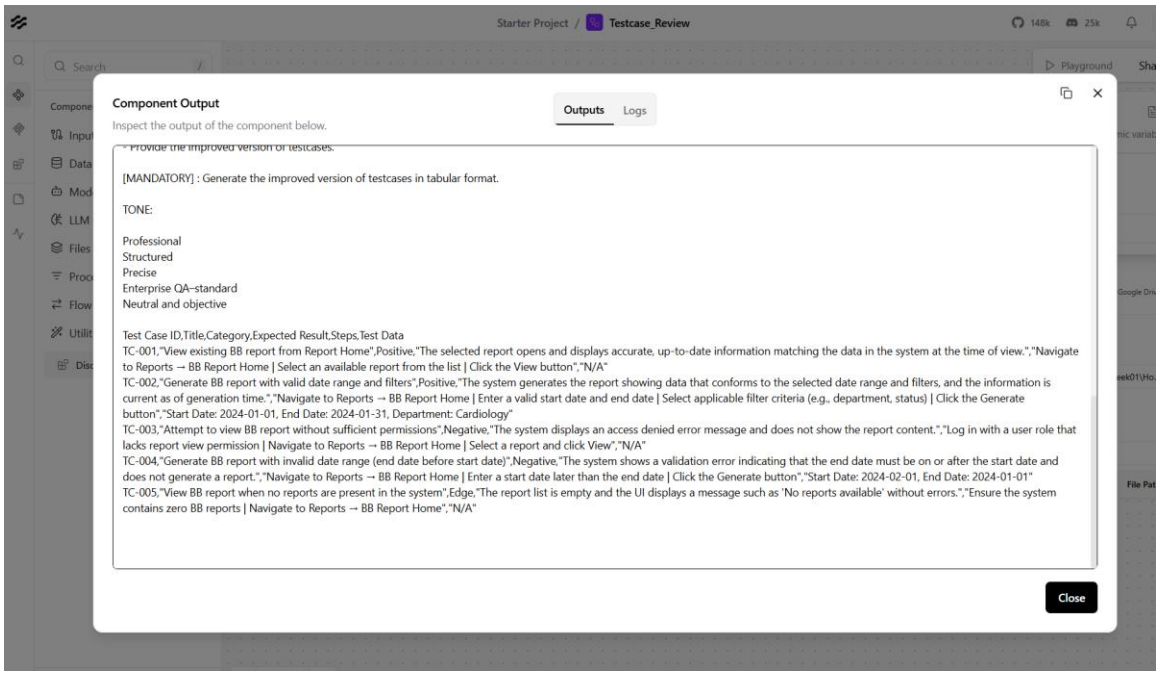


4.2 Execution of Prompt Template

The below 3 screenshots are the Prompt Template component's output which is the Prompt given and the input testcases.

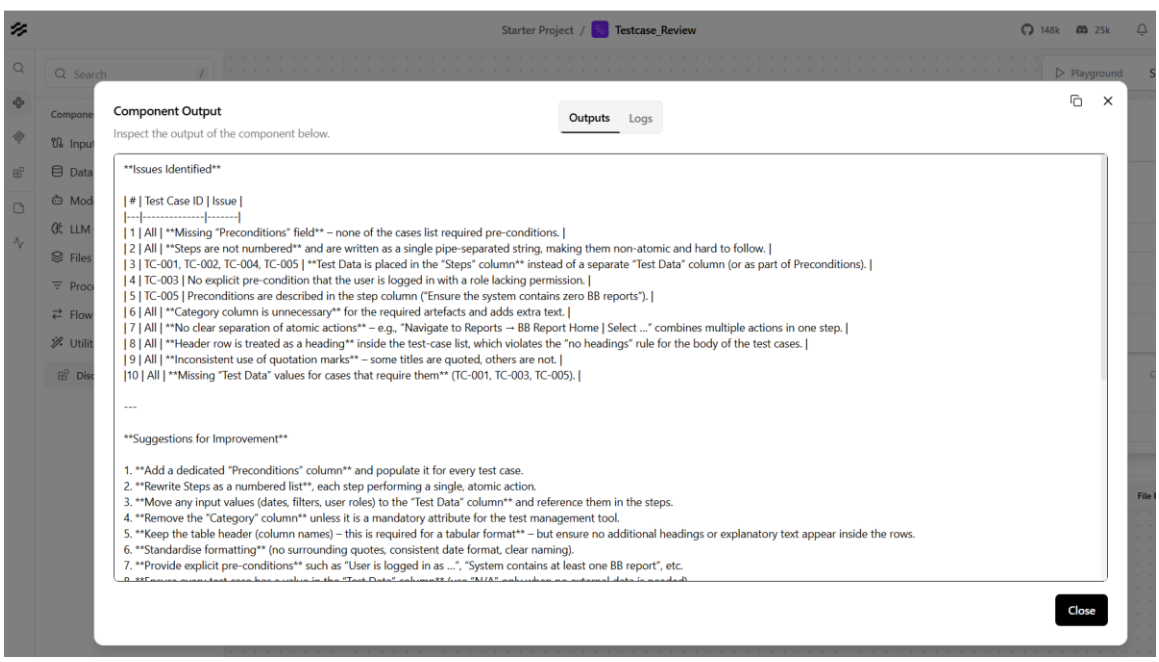


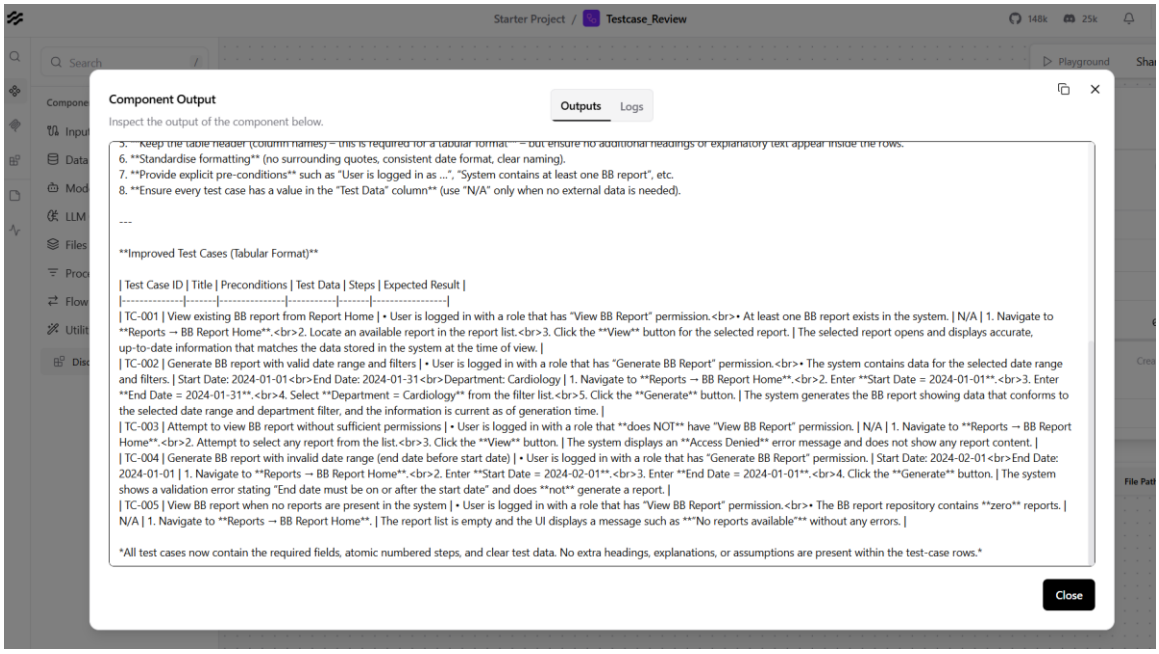




4.3 Execution of Groq component

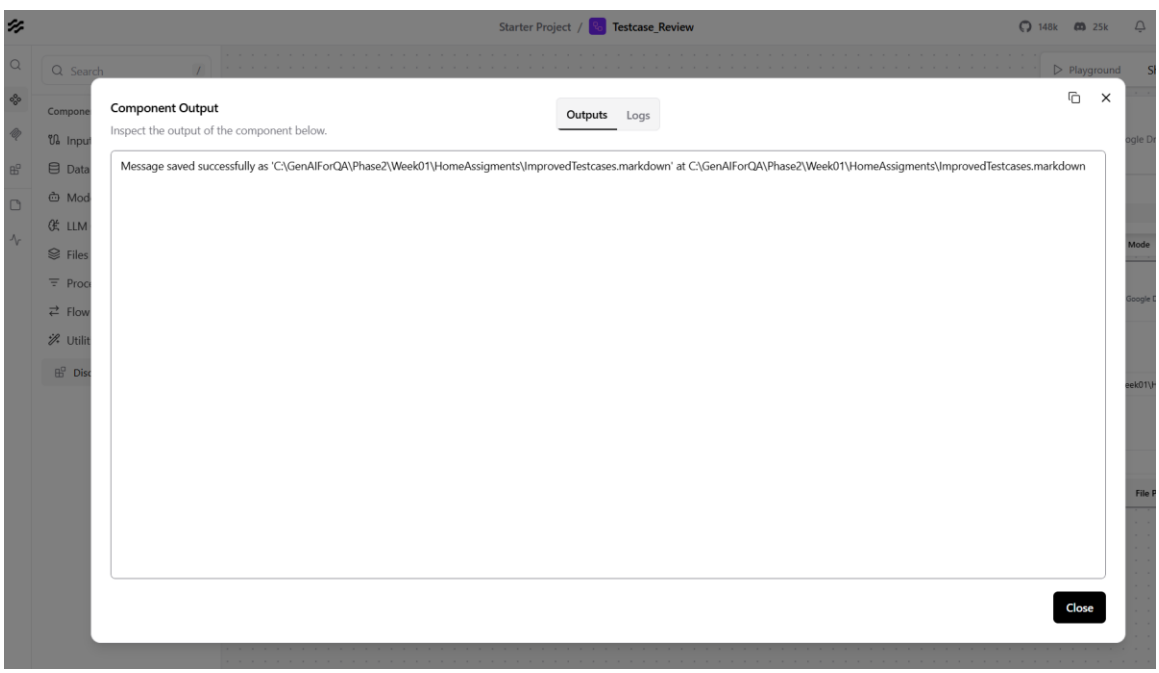
The below screenshots are the Groq component's output which is the response generated based on the prompt given and the input testcases fed to the groq model





4.4. Execution of Write File component

The below screenshots shows the output of the Write File component which is the filepath of the output.



5. OUTPUT

5.1 The following output is generated in the Write File component of Langflow and is saved as .mdb file.

Issues Identified

| # | Issue |

|---|-------|

| 1 | **Missing Preconditions** – none of the test cases include a “Preconditions” field. |

| 2 | **Steps are not numbered** – steps are combined in a single pipe-separated string, making them hard to follow and not atomic. |

| 3 | **Steps are not atomic** – several steps contain multiple actions (e.g., “Navigate … | Select … | Click …”). |

| 4 | **Extra columns** – the original file contains “Category” and “Test Data” columns that are not part of the required structure. |

| 5 | **Inconsistent formatting** – some test cases embed test data inside the “Steps” column instead of a dedicated “Test Data” field. |

| 6 | **Lack of clarity on expected results** – wording is sometimes vague (e.g., “accurate, up-to-date information”). |

| 7 | **No explicit “Test Data” column** – where required, test data is missing or mixed with steps. |

| 8 | **Presence of explanatory text** – the original list includes headings and descriptive sentences that are not part of the test case body. |

Suggestions for Improvement

1. **Add a “Preconditions” column** to capture system state, user role, and any required data before execution.

2. **Number each step** and keep each step atomic (one action per step).

3. **Separate test data** from steps; use a dedicated “Test Data” column when specific values are needed.

4. **Remove non-required columns** (Category, extra headings) to keep the test case concise.

5. **Standardise wording** for Expected Result – state the exact UI message or system behavior.

6. **Use a consistent tabular layout**: `Test Case ID | Title | Preconditions | Steps | Expected Result | Test Data`.

7. **Validate that every row contains all mandatory fields** before exporting to the test management tool.

Improved Test Cases (Tabular Format)

| Test Case ID | Title | Preconditions | Steps | Expected Result | Test Data |

|---|---|---|---|---|---|

| TC-001 | View existing BB report from Report Home | · User is logged in with a role that has **View** permission.
· At least one BB report exists in the system. | 1. Navigate to **Reports → BB Report Home**.
2. Locate an available report in the list.
3. Click the **View** button next to the selected report. | The selected report opens and displays information that exactly matches the data stored in the system at the time of viewing. | N/A |

| TC-002 | Generate BB report with valid date range and filters | · User is logged in with a role that has **Generate** permission.
· System contains data for the chosen date range and filter criteria. | 1. Navigate to **Reports → BB Report Home**.
2. Enter a valid **Start Date** and **End Date**.
3. Select filter criteria (e.g., Department = Cardiology, Status = Active).
4. Click the **Generate** button. | The system generates the BB report; the report data conforms to the selected date range and filters and reflects the current state of the system at generation time. | Start Date: 2024-01-01
End Date: 2024-01-31
Department: Cardiology |

| TC-003 | Attempt to view BB report without sufficient permissions | · User is logged in with a role **lacking** the **View** permission for BB reports. | 1. Navigate to **Reports → BB Report Home**.
2. Select any report from the list.
3. Click the **View** button. | An **Access Denied** error message is displayed and no report content is shown. | N/A |

| TC-004 | Generate BB report with invalid date range (end date before start date) | · User is logged in with a role that has **Generate** permission. | 1. Navigate to **Reports → BB Report Home**.
2. Enter a **Start Date** that is later than the **End Date**.
3. Click

the **Generate** button. | A validation error is shown stating “End date must be on or after start date.” No report is generated. | Start Date: 2024-02-01
End Date: 2024-01-01 |

| TC-005 | View BB report when no reports are present in the system | · User is logged in with a role that has **View** permission.
· The system contains **zero** BB reports. | 1. Navigate to **Reports → BB Report Home**. | The report list is empty and the UI displays a message such as **“No reports available.”** No errors are shown. | N/A |

All test cases now contain the mandatory fields, numbered atomic steps, clear preconditions, and concise expected results, complying with the enterprise QA standard for the Healthcare domain.
