

MONGODB MCP

Install the MongoDB MCP in VS code extension

Connection to MongoDB

```
Provided MongoDB Atlas connection string

Ran connect – mongodb (MCP Server)

Listed available databases in MongoDB instance

Ran list-databases – mongodb (MCP Server)

Presented successful connection information to the user

✅ Successfully connected to MongoDB!

Your MongoDB Atlas cluster contains 5 databases:
```

Database	Size
db_enterprise_rag	1.4 MB
db_resumes	2.1 MB
db_testcases	109.0 MB
admin	0 bytes
local	0 bytes

```
You're now ready to query collections, run aggregations, and
manage your MongoDB data. What would you like to do next?
```

Create a collection

```
Reconnected using the same connection string

Ran connect – io.github.mongodb-js/mongodb-mcp-
server (MCP Server)

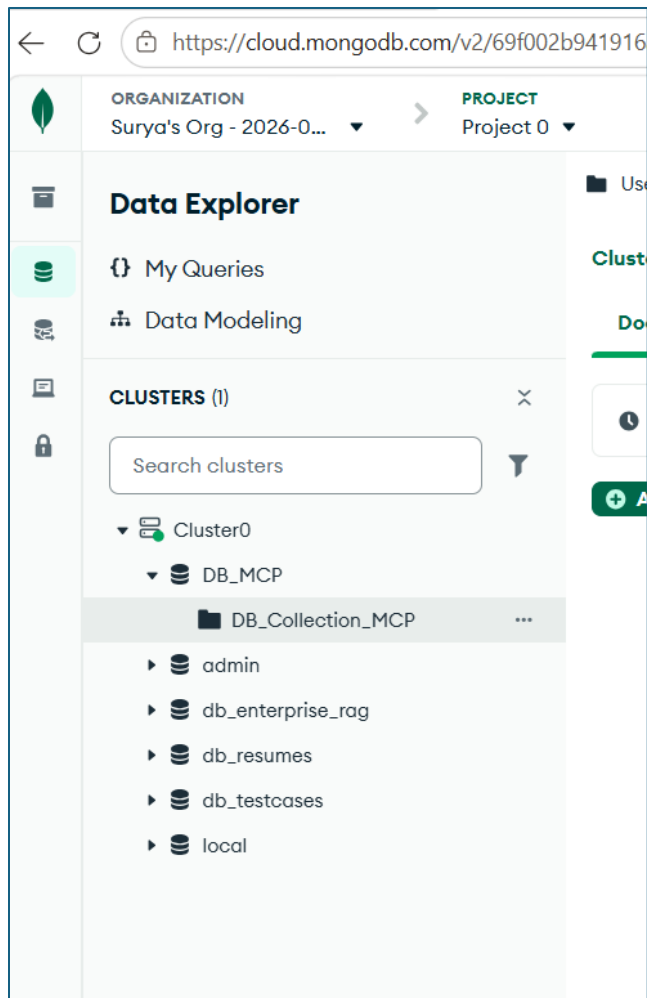

Created the collection again

Ran create-collection – io.github.mongodb-js/mongodb-mcp-
server (MCP Server)

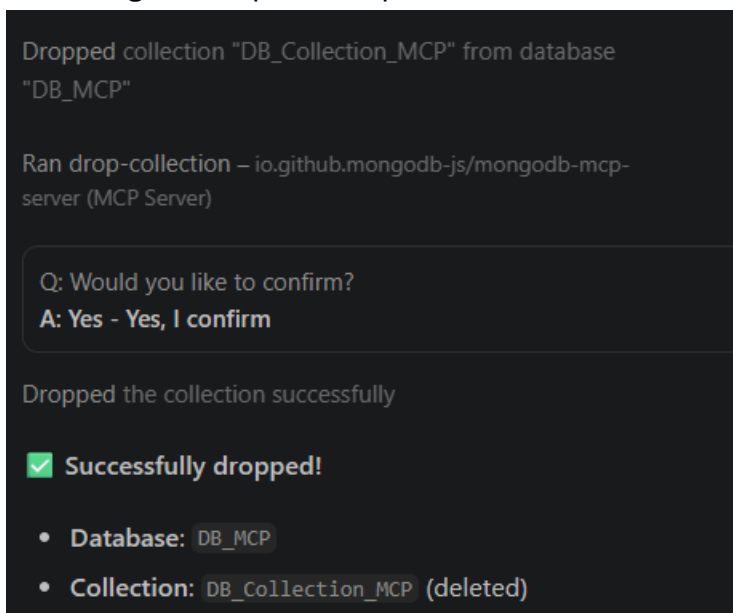

Created collection in the new database

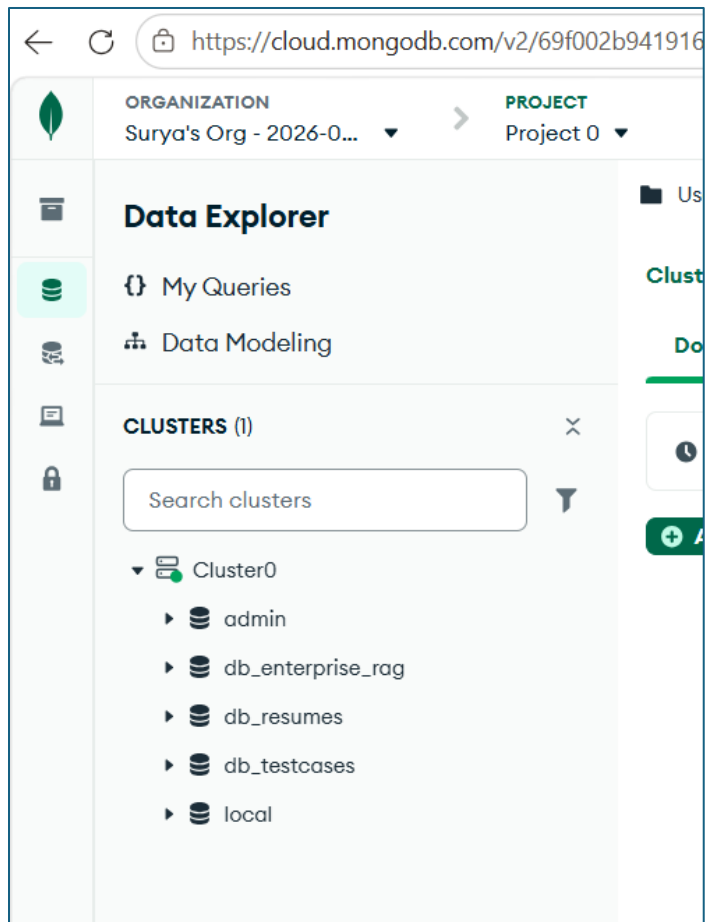

✅ Successfully created!

• Database: DB_MCP (new)
• Collection: DB_Collection_MCP (new)
```

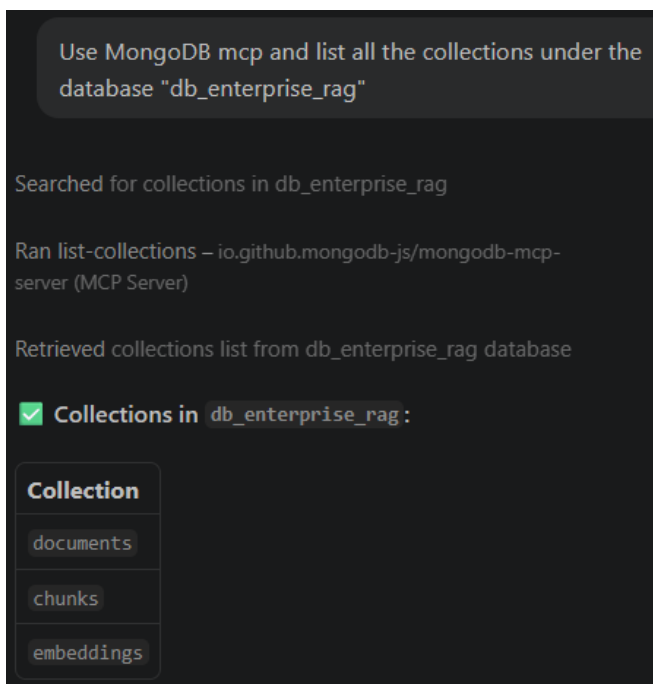

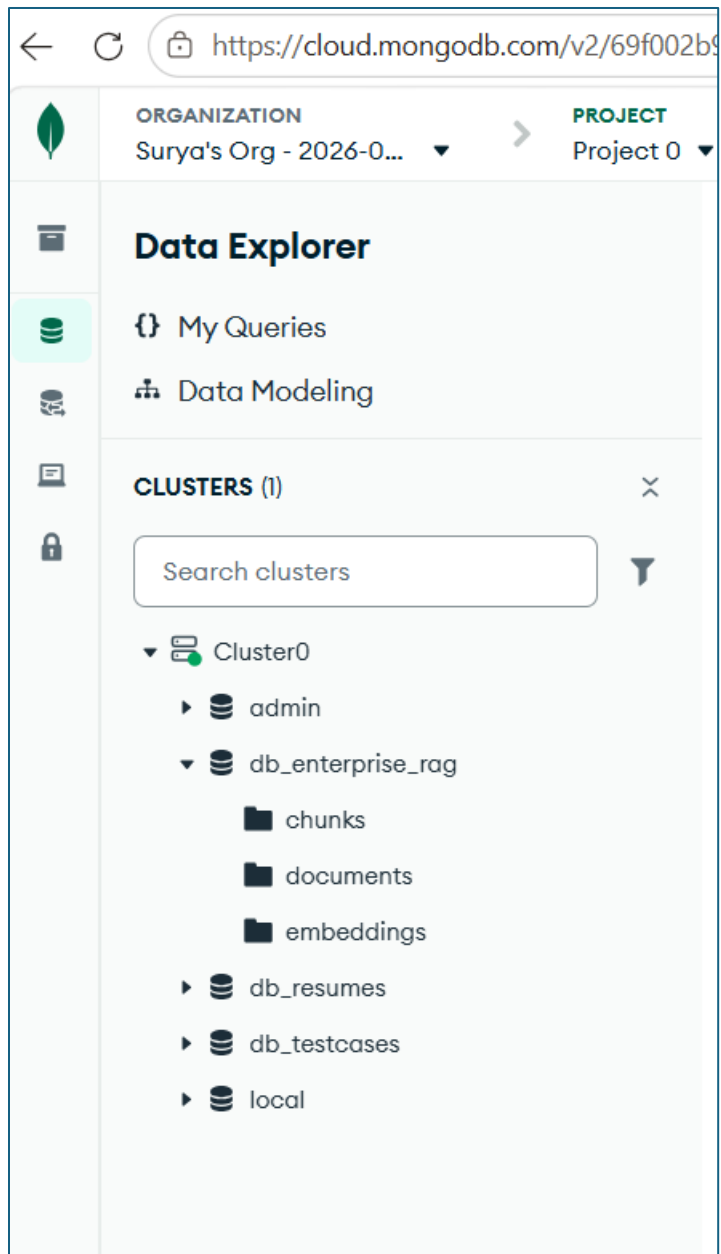

Use MongoDB mcp and drop the collection DB_Collection_MCP

List all the collections

List a database

Use MongoDB mcp and list all the databases under the Cluster "Cluster0"

Searched for databases in MongoDB cluster

Ran list-databases – io.github.mongodb-js/mongodb-mcp-server (MCP Server)

Retrieved list of databases in Cluster0

✅ All Databases in Cluster0:

Database	Size
db_enterprise_rag	1.4 MB
db_resumes	2.1 MB
db_testcases	109.0 MB
admin	0 bytes
local	0 bytes

Your cluster contains **5 databases** with a total size of approximately **112.6 MB**. Would you like to explore any specific database or collection?
